A powerful, yet user-friendly application that enables you to set up the custom email server you need so you can manage incoming and outgoing messages more efficiently. How to install AXIGEN: How to install AXIGEN: AXIGEN Enterprise Edition is a powerful, yet user-friendly application that enables you to set up the custom email server you need so you can manage incoming and outgoing messages more efficiently. After a straightforward setup, which may take a little longer if you meet the minimum system requirements, you come face to face with the configuration wizard. As you probably hinted, the tool guides you through the processes of setting up the domain where you can host your website or application. Although it may sound complicated, the process is fairly intuitive and entails you specify a few details such as the administrator password, domain name and the services that you would like to enable in AXIGEN, including the common SMTP, IMAP and POP3 protocols. Once you are done setting up the domain, you can open your favorite web browser and access the AXIGEN dashboard that allows you to configure the actual email server. On a side note, you can use the credentials you added when setting up the domain. The web-based dashboard is where the magic happens, as it includes a plethora of features and tools that allow you to manage every little detail about your email server. Therefore, you can easily create folders, groups, authorize users, manage privileges and set up charts and reports so you can monitor the server are just a few example of the options available. A powerful tool for anyone hosting their own website or app Design Considerations: MX records must be distributed over more than one DNS server, and be separated by a period. Example: mx.provider.com. USA. It is common for mail servers to be hosted on ISPs' servers. The MX records for your domain will need to be pointing to that server, not your personal server. ISP Requirements: Email and DNS Services: It is common for ISPs to filter all outgoing mail leaving their network. If you are expecting this mail to be filtered, verify that you have specified outgoing mail servers and addresses that are not filtered. POP/IMAP/SMTP Services: It is common for ISPs to filter all incoming mail entering their network. If you are expecting this mail to be filtered, verify that you have specified incoming mail servers and addresses that are not filtered. Firewalls: For a fully functioning email system, all internal network connection
