What's New in the GBFlash?

=========== The most important features of GBFlash: - Easy Installation (All you have to do is download a zip archive; it has an ISO file and a series of pre-compiled binary files.) - Embedded GUI (The GUI is not required to use the feature) - Easy configuration - Easy repair (recovering from damage caused by wrong settings for example) - Contains a very useful sources file that will allow you to upgrade the BIOS as soon as possible after a

problem occurs. - The intended use of GBFlash: If a BIOS Update is not available on your device's BIOS screen, you can always enter an automated BIOS update process. Additional features: - The use of the Windows task scheduler (Should be able to handle this) - The ability to use the BIOS date as the software should no longer be configured manually when used with an update. - The ability to configure time of BIOS update without the need to update when it is actually needed. - Auto-processing of BIOS updates. - The ability to use our own BIOS string. - Insert / Remove the USB flash drive when using the feature. - The ability to display the firmware version in GBFlash. - The ability to display a "Bitmap" of BIOS settings. -

Maintaining the BIOS date at the time of a BIOS update. - The ability to choose which BIOS version to update. (The feature is still in beta) GBFlash is not supported by any manufacturers and its functionality depends on the BIOS vendor. GBFlash is not a replacement for the factory BIOS, but if the firmware update is not provided, the user will have to go through the process. The version of GBFlash used in this tutorial: ===========

==============================

GBFlash v1.1 (Added on Aug 31, 2018) Current Version: ===================== GBFlash v1.1 (Added on Aug 31, 2018) The version was chosen in order to guarantee a system that works without problems. GBFlash v1.1 is not the newer version of GBFlash. As

many of you may not have access to the BIOS update, the choice was made to be able to support all of the people. GBFlash is designed for a simple installation that is not intended to replace the factory BIOS. Other uses: ============== Although GBFlash is intended for the purpose stated, it can also be used in the following situations:

System Requirements For GBFlash:

Minimum: OS: Windows 7 64-bit Processor: Intel i5-2400 Memory: 8GB RAM Recommended: OS: Windows 8.1 64-bit Processor: Intel i7-3770 Memory: 16GB RAM How To Install: How to install drivers for the A10-5700 on Windows 7: Please download and install the latest driver, you can visit the following websites for driver download: If you're on Windows 8.
